Hello:

I would like to know where I can find information about the Wise Road Disposal EPA Site #OH0001328350 which is located on Wise Road in Green Township (Summit County) near Greensburg, Ohio, zip code 44232. I would like to know when it was opened and closed and what type of material was removed or deposited there. The aerial photos below are of the area and are oriented with north to the left (i.e. east is up).

The 1934 aerial photo below shows the area before material was removed or deposited. Note that no bodies of water exist:

The 1950 aerial photo below shows the area during excavation which caused the bodies of water to form:

The 1980 aerial photo below shows the area after the site closed and that the bodies of water still exist:

The bodies of water in the aerial photos above suggest that material was only removed and not deposited there.

I would like to know what material was removed (i.e. stripped) from the land and caused those bodies of water to form. I would also like to know if material was indeed deposited there and what that material was.

I would like the results in an electronic file.

Thank you for your time and efforts,

Tim Ball
